Dynamics is the science of how things move. A complete solution to the motion of a system means that we know the coordinates of all its constituent particles as functions of time. For a single point particle moving in three-dimensional space, this means we want to know its position vector $\mathbf{r}(t)$ as a

This is problem 1.3 in the Fetter and Walecka classical mechanics text. "A massless string is placed over a massless pulley, and each end is wound around and fastened to a vertical hoop. The hoops have masses M_1 and M_2 and radii R_1 and R_2 . The apparatus is placed in a uniform gravitational field and released with each end of the string
