The only body force that is of interest in the mechanics of flight is the force due to the attraction of gravity, which we know simply as the weight of the object. Forces (of whatever type) are measured in the units of newtons (N) in the metric SI system or pounds force (lbf) in the Imperial or Federal systems.

A consequence of the definition of a streamline in steady flow is that the mass flow (slug=s) passing through cross section 1 must be the same as that passing through 2. By definition, there is no mechanism for mass to cross a stream- line—the mass flow rate must be conserved between the two streamlines.
